

Optimal Proof Systems for Complex Sets are Hard to Find

Fabian Egidy, Christian Glaßer

STACS 2025 Workshop, Jena, 03. March 2025

Proof Systems (Cook and Reckhow, 1979)

Proof Systems (Cook and Reckhow, 1979)

A function $f \in \text{FP}$ is called a **proof system** for ran_f

Proof Systems (Cook and Reckhow, 1979)

A function $f \in \text{FP}$ is called a **proof system** for ran_f

Proof Systems (Cook and Reckhow, 1979)

A function $f \in \text{FP}$ is called a **proof system** for ran_f

Proof Systems (Cook and Reckhow, 1979)

A function $f \in \text{FP}$ is called a **proof system** for ran_f

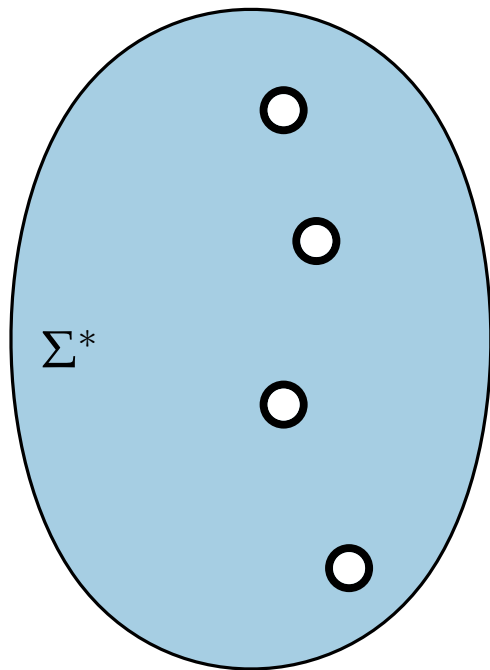

f

Proof Systems (Cook and Reckhow, 1979)

A function $f \in \text{FP}$ is called a **proof system** for ran_f

f

Proof Systems (Cook and Reckhow, 1979)

A function $f \in \text{FP}$ is called a **proof system** for ran_f

Proof Systems (Cook and Reckhow, 1979)

A function $f \in \text{FP}$ is called a **proof system** for ran_f

Proof Systems (Cook and Reckhow, 1979)

A function $f \in \text{FP}$ is called a **proof system** for ran_f

Proof Systems (Cook and Reckhow, 1979)

A function $f \in \text{FP}$ is called a **proof system** for ran_f

Proof Systems (Cook and Reckhow, 1979)

A function $f \in \text{FP}$ is called a **proof system** for ran_f

Proof Systems (Cook and Reckhow, 1979)

A function $f \in \text{FP}$ is called a **proof system** for ran_f

○ and ○ are proofs of the tautology ○

Def. A proof system for L that simulates all proof systems for L is an optimal proof system for L .

Existence of Optimal Proof Systems

Existence of Optimal Proof Systems

Are there sets with optimal proof systems?

Existence of Optimal Proof Systems

Are there sets with optimal proof systems?

Thm. All sets in NP have optimal proof systems.

Existence of Optimal Proof Systems

Are there sets **outside NP** with optimal proof systems?

Thm. All sets in NP have optimal proof systems.

Existence of Optimal Proof Systems

Are there sets **outside NP** with optimal proof systems?

Thm. All sets in NP have optimal proof systems.

Thm. [Mes00]
coNE contains sets without optimal proof systems.

Existence of Optimal Proof Systems

Are there sets **outside NP** with optimal proof systems?

Thm. All sets in NP have optimal proof systems.

Thm. [Mes00]
coNE contains sets without optimal proof systems.

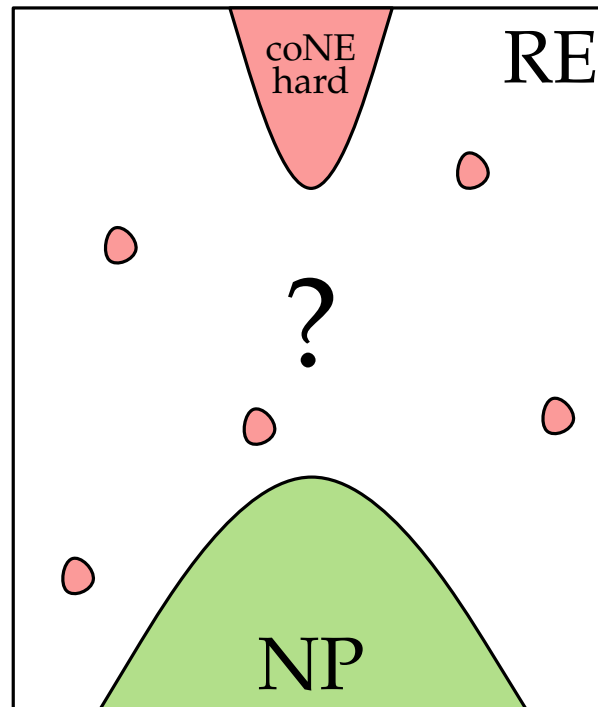

Existence of Optimal Proof Systems

Are there sets **outside NP** with optimal proof systems?

Thm. All sets in NP have optimal proof systems.

Thm. [Mes00]
coNE contains sets without optimal proof systems.

Is This Question Hard?

Are there sets **outside NP** with optimal proof systems?

Is This Question Hard?

Are there sets **outside NP** with optimal proof systems?

Negative Answer

Is This Question Hard?

Are there sets **outside NP** with optimal proof systems?

Negative Answer

- implies $NP \neq coNP$

Is This Question Hard?

Are there sets **outside NP** with optimal proof systems?

Negative Answer

- implies $NP \neq coNP$
- relativization barrier for plausible assumptions

Is This Question Hard?

Are there sets **outside NP** with optimal proof systems?

Negative Answer

- implies $NP \neq coNP$
- relativization barrier for plausible assumptions

Provably difficult!

—

Feasible?

Is This Question Hard?

Are there sets **outside NP** with optimal proof systems?

Negative Answer

- implies $NP \neq coNP$
- relativization barrier for plausible assumptions

Provably difficult!

Positive Answer

—

Feasible?

Both answers aren't known to have unlikely consequences!

Is This Question Hard?

Are there sets **outside NP** with optimal proof systems?

Negative Answer

- implies $NP \neq coNP$
- relativization barrier for plausible assumptions

Provably difficult!

Positive Answer

Relativization barrier!

Feasible?

Both answers aren't known to have unlikely consequences!

Relativizable Proofs

Relativizable Proofs

Known: $P \subseteq NP$

Relativizable Proofs

Known: $P \subseteq NP$

Same method: $\forall O [P^O \subseteq NP^O]$

Relativizable Proofs

Known: $P \subseteq NP$

Same method: $\forall O [P^O \subseteq NP^O]$

\Rightarrow method is relativizable (i.e., works relative to all oracles)

Relativizable Proofs

Known: $P \subseteq NP$

Same method: $\forall O [P^O \subseteq NP^O]$

\Rightarrow method is relativizable (i.e., works relative to all oracles)

50 years experience:

almost all known proofs in structural complexity theory are
relativizable

Relativizable Proofs

Known: $P \subseteq NP$

Same method: $\forall O [P^O \subseteq NP^O]$

\Rightarrow method is relativizable (i.e., works relative to all oracles)

50 years experience:

almost all known proofs in structural complexity theory are
relativizable

Thm. [BGS75] $\exists O [P^O = NP^O]$

Relativizable Proofs

Known: $P \subseteq NP$

Same method: $\forall O [P^O \subseteq NP^O]$

\Rightarrow method is relativizable (i.e., works relative to all oracles)

50 years experience:

almost all known proofs in structural complexity theory are
relativizable

Thm. [BGS75] $\exists O [P^O = NP^O]$

Cor. Proofs for $P \neq NP$ have to be nonrelativizable

Relativizable Proofs

Known: $P \subseteq NP$

Same method: $\forall O [P^O \subseteq NP^O]$

\Rightarrow method is relativizable (i.e., works relative to all oracles)

50 years experience:

almost all known proofs in structural complexity theory are
relativizable

Thm. [BGS75] $\exists O [P^O = NP^O]$

Cor. Proofs for $P \neq NP$ have to be nonrelativizable

Oracles indicate the difficulty of proving a statement

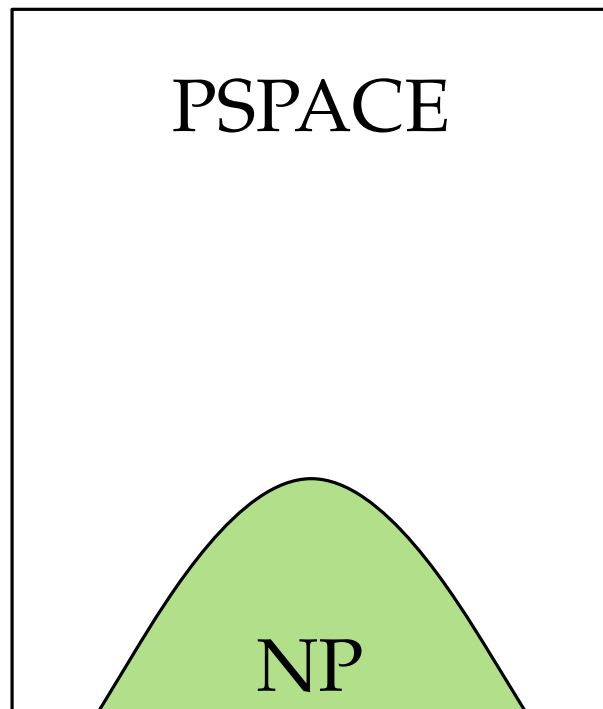

Our Results

Our Results

Thm. [EG25] $\exists O$ [PH^O is infinite and all $L \in \text{PSPACE}^O \setminus \text{NP}^O$ have no optimal proof system]

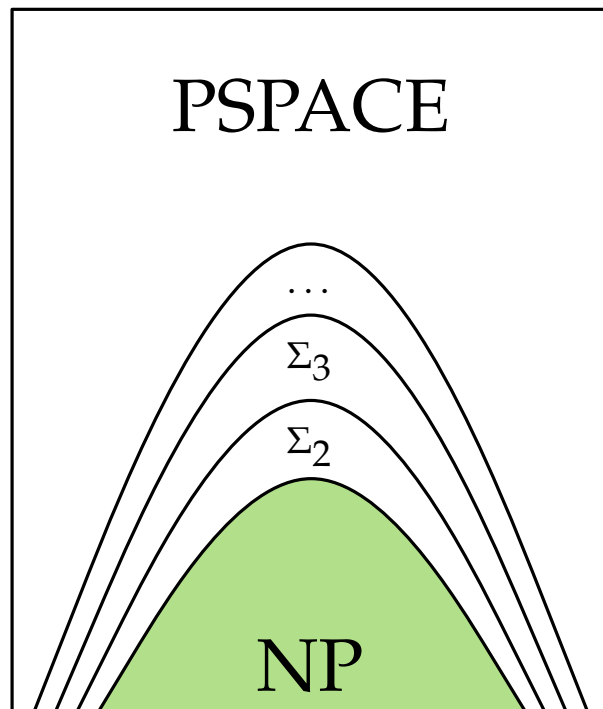

Our Results

Thm. [EG25] $\exists O$ [PH^O is infinite and all $L \in \text{PSPACE}^O \setminus \text{NP}^O$ have no optimal proof system]

—

Feasible?

Both answers aren't known to have unlikely consequences!

Our Results

Are there sets **outside NP** with optimal proof systems?

Negative Answer

- implies $NP \neq coNP$
- relativization barrier for plausible assumptions

Provably difficult!

Positive Answer

- relativization barrier for “almost all” sets

Feasible?

Both answers aren't known to have unlikely consequences!

Our Results

Are there sets **outside NP** with optimal proof systems?

Negative Answer

- implies $NP \neq coNP$
- relativization barrier for plausible assumptions

Provably difficult!

Positive Answer

- relativization barrier for “almost all” sets

~~Feasible?~~

Explains why no such set is known

Both answers aren't known to have unlikely consequences!

From NQP to NP?
